Michael Faraday

Michael Faraday is one of the great scientists in the history of electricity. He was born near London in 1791. At the age of thirteen Michael started to work. Some of the scientific works and articles aroused his interest in science and he started to read.

Today almost all the electricity we use is generated by great machines with magnets in them, but in those days no one knew how to do it.

Faraday's scientific interests were varied. He made new kind of glass and a new kind of steel. Faraday made about two thousand difficult experiments and made countless discoveries in chemistry and physics. He made a wonderful machine which was the father of all the great machines that make electricity today. They light and heat our houses and they make our radio-sets work. Michael Faraday was the creator of the electric motor and had changed the face of the earth.

Questions Вопросы

1. Who is the creator of the electric motor?
2. When did he start to work?
3. Why do we need electricity at home?
4. How did he become interested in science?
5. Where was he born?
6. What spheres did he make experiments in?

Hi Paula!

Greetings from London! I am here with my parents and am having a *whale* of a time. We have been here since Thursday and have already seen and done so much.

On Friday, we went to see The Moscow State Circus. I was so excited as I had never been to the circus before. It was a perfect evening full of amazing tricks. Most of all, I enjoyed watching the trapeze artists flying high up in the air. I have never seen anything like it! It was a hair-raising experience! Luckily, no one fell down! Of course, there were also clowns dressed in funny costumes too, as well as other artists. If

you ever get the chance to see this famous circus, you should go – it is an unforgettable experience. And, don't forget to try the toffee apples – they are the best!

Hope you are having a fun time too. Will tell you more about it when I see you.

Love,

Diane
